

Our own InduKey brand

InduKey products are exclusively manufactured in-house at GETT's company headquarters.

Our own InduKey brand

GETT uses the InduKey brand to manufacture data input products in-house at its Treuen business site. InduKey stands for premium products and solutions, which meet strict quality guidelines. 'Made in Germany' is the standard that we follow.

Following a successful start-up period as a distribution company for industrial keyboards and mice, GETT began manufacturing its own standard products at the end of the 1990s. The company then gradually started introducing individual solutions for data input components.

Ongoing developments in new products, technologies and increases in customer demands and the expansion of production capacity have enabled InduKey to now enjoy worldwide recognition as a quality brand.

The following products and technologies are available with the InduKey brand:

Ready-for-use industrial keyboards

Ready-for-use medical keyboards

Individual front panels with keys, buttons, touchscreens, displays and other control elements

Complete operating solutions set in a housing

Divided into 4 product families:

[InduDur \(foil\)](#)

[InduProof \(silicone\)](#)

[InduSense \(glass/capacitive\)](#)

[InduSteel \(stainless steel\)](#)

Reliability, a long serviceable life, a variety of options, flexibility and a high degree of application relevance are the key elements in InduKey products. Strict quality standards, internal audits, well-trained specialist staff, high-quality production equipment and certification (e.g. DIN ISO 9001:2008) guarantee that these criteria are met.

Because GETT handles nearly all the manufacturing work itself, it controls all the production processes and can respond to individual customer requests quickly.
