

HMI system solutions

HMI system solutions

HMI system with capacitive operating elements and surfaces made of glass

Our HMI system solutions are our response to increasing levels of complexity, diversity and cost efficiency. You receive tailor-made turnkey concepts from GETT, which are consistently geared towards meeting your individual needs.

Our range of work covers all the stages ranging from the initial idea to delivering and commissioning the system. Our expertise enables us to use all the available operating technologies. They range from a simple touch panel in a case to complex, multi-part systems, which meet various requirements like explosion protection, IP and IK protection classes, lighting or integrated NFC functionality.

As a hardware specialist, we combine a wide variety of case and front materials, operating components, mountings, computer electronics, monitors and interfaces for your individual HMI system!

Your benefits

- Unique features as a result of individually developed HMI systems
- Specialisation through our ability to handle small numbers of items too
- The best possible solutions as a result of our technological expertise
- Cost efficiency through our modular concept
- High degrees of reliability through our own quality production

Our service components

- Advice and drawing up concepts
- Development and design
- Prototyping and production
- Quality assurance and risk management
- Commissioning and service
