

InduSteel

InduSteel

InduSteel® is our brand for HMI solutions with user interfaces made of stainless steel. The spectrum ranges from numeric keypads suitable for installation to complete operating fronts with integrated touch sensors. As part of the InduKey brand family, it represents maximum durability and reliability.

The brand's wording consists of "Indu", which universally stands for "industry" or "industrial", like all the initial syllables within the brand family. "Steel" signifies the material used to manufacture the units.

All the products and solutions covered by this brand are developed and manufactured at our company headquarters. In addition to customised solutions, we offer standard capacitive keyboards, which are ready for use and installation. We use nothing but stainless steel of the highest quality and stability. Our expertise covers all the switch and operating technologies in this field.
