

Service: How do I find a product?

Service: How do I find a product?

Our home page provides you with several opportunities of identifying and finding a product. We will show you four simple ways of obtaining product information quickly and simply.

Option 1: Search option

Our [search box](#) gives you the opportunity of obtaining product information through long descriptions of items (e.g. TKV-094-TOUCH-ADH-USB) or using catalogue numbers (e.g. KR21200).

Option 2: Data sheet

Once you have found the product that you are looking for, a data sheet opens in the [Technical data](#) tab with all the information relevant to a product at a glance.

Option 3: Keyboard finder

Do you have particular requirements for your product? Then we would recommend our keyboard finder. You can see how to reach it [here](#). You can freely configure the product features that you require in five categories using the template.

Option 4: Product catalogue

Our [product terminology](#) provides information about technical features and special elements in products.
