

TKR TOUCH KEYBOARDS

GETT[®]

For integration in devices and systems!

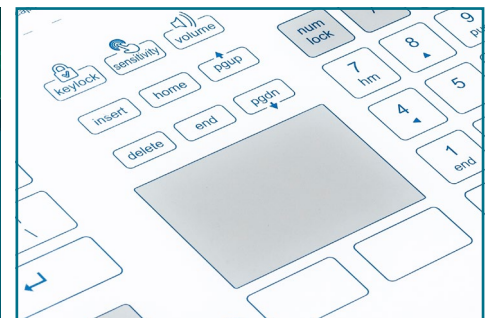

Flat. Elegant. Up-to-Date.

The TKR range represents a new generation of touch keyboards for insertion in machines, systems and objects. The high degree of practicality and the variety of design options make the keyboards suitable for use in industrial, medical and public settings.

Thanks to their sealed surface, it is possible to thoroughly clean and disinfect the keyboards and they therefore help to create a hygienic working environment. The keyboards also offer special features, which enable comfortable working practices. Their low height makes them ideal for insertion in flat surfaces made of different materials, when units need to be flush-mounted.

- Completely even operating surface made of glass
- Simple and straightforward to insert
- Cleaning possible without unintentionally triggering keys through the key lock function
- A pleasant operating feel
- Integrated touch-pad
- IP65 protection rating (if inserted properly)
- Simple inclusion of individual layouts and graphic elements like logos or symbols
- Available with DE, US or FR layouts ¹

¹ Others available on request
